Square straight standoffs,
710CU 18" pull, 0.5" 613 end caps
With no insert, set to standard 12" CTC

Patent Pending

1185 SERIES PULLS FROM TRIMCO

July 2015

Trimco, an industry leader in high-performing security and protection hardware for government, commercial and institutional buildings, today announced the launch of the 1185 Door Series Pulls. Trimco's 1185 Series Door Pulls are uniquely designed to make the world healthier, while being durable, flexible, and highly customizable. These pulls are offered with Healthy Hardware™ copper alloy touch surfaces which are proven to kill bacteria and help prevent the spread of disease. Healthy Hardware™ surfaces are not a coating, cannot scratch or peel off and will continue to be effective in killing bacteria for the life of the product.

The adjustable and interchangeable standoffs are installer friendly for doors that are not perfectly prepared, and the configurable end caps allow architects, designers and owners the flexibility to create a customized pull that compliments the opening.

"The new Healthy Hardware 1185 Series Door Pulls are a game changer. Period. Healthcare facilities have shied away from using bactericidal copper hardware, despite its documented advantages over anti-microbial coatings, due to prohibitive costs. The 1185 combines the bacteria-killing properties of copper with unique adjustability and attractive customization features, at a similar price tag to stainless steel," stated Anthony Mastroianni, Trimco Director of Sales.

Trimco manufacture's a wide range of Healthy Hardware products. For more information regarding the new 1185 Series Pulls go to www.trimcohardware.com.
